Primary packaging

For better hygiene and freshness

With a multitude of small improvements to its linear aseptic fillers, KHS has a big impact on efficiency, flexibility, ease of operation and product safety.

Secondary packaging

For less packaging material

Instead of shrink film KHS uses easy-to-remove dots of adhesive to fork PET bottles and cans into stable packs, thus saving up to 90% in packaging materials - now also in the high-performance range.

Secondary packaging

For more flexibility in can packaging

Film, cardboard or paper - a new KHS packer provides all the options to cater for dynamic market and customer requirements and at the same time saves on energy and CO₂ emissions.

Tertiary packaging

For more efficiency in packaging and palletizing

KHS has used robots for palletizing for over 25 years: these high-tech systems master tasks such as sorting, distributing, depalletizing, palletizing and stacking quickly, simply and economically.
