

FOCUS ON SUSTAINABILITY

Working for more climate protection

11/15/2021, 1 minutes reading time

Low energy consumption, minimal use of resources, fewer emissions and environmentally-friendly packaging materials: with each further improvement and move towards sustainable beverage packaging, together with our customers we're helping to protect the climate.

For less plastic in packaging waste

Right on trend: the Innopack Kisters CNP from KHS turns beverage cans into packs without the need for any plastic or adhesive whatsoever, instead using cardboard clips available

in an open and a closed version.

For more efficiency and quality in beer filling

Less CO₂ coupled with exceptionally low oxygen pickup: the KHS Innofill Glass DRS ECO glass filler even surprises brewers with its unadulterated beer taste - and with lots of modular options to boost efficiency even further.

For lower CO₂ consumption and improved hygiene

Even if cans are extremely popular, they face growing demands regarding their environmental friendliness. As part of the line, this also presents can seamers with a number of challenges that KHS and Ferrum brilliantly master.
